

High Precision Metal Stampings

FOR THE ELECTRONICS INDUSTRY

IT'S ALL IN THE DIE. Minitec guarantees the part at the end of the run—be it 500,000 or a million—will be just like the first!!! We specialize in (all-sectional) progressive and compound production dies. After hardening and tempering, die sections and punches are precisely form ground. Durable high carbon, high chrome tool steel is used when required.

FUTURE DESIGN CHANGES are easily made by use of sectional dies often saving the cost and time of making a new die.

YOUR DIE IS PROPERLY MAINTAINED AND AT NO COST for your exclusive use. We do not manufacture catalog items.

THE SKILL OF OUR EXPERIENCED TOOLMAKERS is offered at cost. Their ingenuity and imagination in the design of tools and dies can buy you a quality product for less money.

YOUR MOST EXACTING SPECIFICATIONS MET—all stampings produced and inspected to meet rigid quality standards. Piece prices are highly competitive.

SELECT YOUR MATERIALS from brass, copper, aluminum, bronze, phosphor bronze, nickel-silver, stainless steel, beryllium copper, Armco magnetic ingot iron, silicon steel, cold rolled steel and others.

POLISHING, TUMBLING and/or DEBURRING are available at nominal cost.

WE SERVE CUSTOMERS ALL OVER THE UNITED STATES. Air freight service means overnight deliveries almost anywhere. The latest automatic power presses assure meeting important customer deadlines.

MAY WE RUSH QUOTATIONS on your current requirements or on future items now in the design stage?

Please send your inquiries to:
